PROFESSIONAL SUMMARY

Senior Software Engineer with 3+ years of experience building and scaling Java, Spring Boot and Kafka microservices for an HRMS and payroll platform serving 700+ enterprise clients and 500K+ users. Strengths in event-driven architecture, distributed concurrency, large-scale migrations and database tuning across PostgreSQL, Redis and Elasticsearch. Currently building MCP-based AI tooling over production datastores for reporting and diagnostics.

SKILLS

Languages: Java (17/25), Python, SQL
Frameworks: Spring Boot, Spring MVC, Hibernate
Messaging & Search: Apache Kafka, Elasticsearch, Maxwell (CDC)
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis
DevOps & Cloud: Docker, Jenkins (CI/CD), Gradle, Git, AWS (EC2, S3)
Architecture: Microservices, Event-Driven Design, Distributed Systems, Concurrency, Fault Tolerance
Testing: JUnit, Mockito
AI Tooling: Claude Code, Codex, Model Context Protocol (MCP), Prompt & Context Engineering

WORK EXPERIENCE

PeopleHum Technologies — Bangalore, India

Senior Software Engineer — *July 2026 – Present*

- Led the upgrade of 102 Spring Boot microservices from Java 17 to Java 25 (LTS) and enabled Virtual Threads fleet-wide, improving concurrency handling and keeping every service on a supported release.
- Leading development of a multi-country payroll platform spanning 27 countries, using AI-assisted development to accelerate delivery of complex payroll capabilities.
- Managed 5 interns as reporting manager over 3 months, owning training, task allocation and code reviews, and partnering with Product Managers to deliver features end to end.

Software Engineer — *July 2023 – June 2026*

- Owned end-to-end development of the Attendance & Leave modules serving 700+ enterprise clients (500K+ users), driving architectural decisions and mentoring 5 engineers through code reviews and design pattern workshops.
- Drove a zero-downtime monolith-to-microservices migration for a 430K+ user platform, moving 50M+ records with 100% data consistency and no service interruption.
- Redesigned attendance calculation from scheduled batch jobs to an event-driven architecture, computing 5–6M daily records with sub-second freshness instead of hourly batch delays.
- Cut average query execution time by 40% through indexing, partition pruning and query optimization on large-scale tables.
- Architected a generic database integration framework with TLS-secured connections (MySQL, MSSQL), processing 5M+ records/day with idempotency, retries and zero data duplication.
- Engineered a configurable overtime engine using the Pipeline Design Pattern, supporting shift-based, differential and planned overtime through dynamic rule evaluation.
- Built an email generation system (Redis caching, Apache Velocity) sending 30,000+ emails/hour at 99.99% uptime with asynchronous processing.
- Built a Kafka-based notification platform that decouples producers from delivery, with a priority-aware orchestrator (immediate for OTPs, scheduled otherwise) unifying push, email and in-app channels behind one interface.

EDUCATION

Dhirubhai Ambani Institute of Information and Communication Technology — Gujarat

MSc in Information Technology – CGPA: 7.69/10 — *Aug. 2021 – May 2023*

PROJECTS

RideSharing.com | *Java, Spring Boot, React* — Sep 2022 – Dec 2022

- Built a full-stack ride-sharing web application enabling drivers and passengers to post and match ride requests along shared routes in either direction.
- Contributed to both the Spring Boot REST API backend and the React frontend as part of a team project.
